

Contents

chapter 1	Complex Numbers	1
1.1	Irrational numbers	1
1.2	Complex numbers	6
1.3	Division and equality of complex numbers	9
1.4	Argand diagram – modulus	13
1.5	Transformations of complex numbers	16
1.6	Conjugate roots theorem	22
1.7	Polar form of a complex number	25
1.8	Products and quotients of complex numbers in polar form	29
1.9	De Moivre's theorem	31
1.10	Applications of de Moivre's theorem	34
	Revision exercises	38
chapter 2	Geometry 2: Enlargements and Constructions	43
2.1	Enlargements	43
2.2	Constructions	50
	Revision exercises	59
chapter 3	Integration	66
3.1	Antidifferentiation	66
3.2	Integrating exponential and trigonometric functions	71
3.3	Applications of integration	75
3.4	Definite integrals	77
3.5	Finding areas by integration	81
3.6	Average value of a function	89
	Revision exercises	94
chapter 4	Applications of Differential Calculus	101
4.1	Tangents: increasing and decreasing functions	101
4.2	Stationary points	106
4.3	Graphs of the derived (or slope) function	112
4.4	Maximum and minimum problems	117
4.5	Rates of change	124
4.6	Related rates of change	128
	Revision exercises	132

chapter 5	Financial Maths	141
5.1	Compound interest	141
5.2	Depreciation	146
5.3	Instalment savings (annuities)	149
5.4	Loans – mortgages	156
	Revision exercises	158
chapter 6	Length, Area, Volume	163
6.1	Revision	163
6.2	Sectors of circles	168
6.3	3-Dimensional objects	173
6.4	Trapezoidal rule for calculating area	181
	Revision exercises	186
chapter 7	Probability 2	195
7.1	Tree diagrams	195
7.2	Probability distributions: expected value	200
7.3	Bernoulli trials: binomial distribution	206
7.4	How to show events are independent	212
7.5	Probability involving permutations and combinations	216
7.6	Probability simulations	219
	Revision exercises	223
chapter 8	Functions and Graphs	230
8.1	Introduction to functions	230
8.2	Composition of functions	239
8.3	Types of functions	242
8.4	Inverse functions	248
8.5	Sketching the graphs of functions	253
8.6	Exponential and logarithmic functions	262
8.7	Related graphs	269
	Revision exercises	273
chapter 9	Statistics 2	282
9.1	Scatter diagrams	282
9.2	Measuring correlation: line of best fit	288
9.3	The normal distribution	295
9.4	Normal probability distributions	303
	Revision exercises	309

chapter 10 Inferential Statistics	315
10.1 Confidence interval for population proportion	315
10.2 Hypothesis testing for population proportion	323
10.3 Sampling distribution of the mean: the central limit theorem	326
10.4 Confidence interval for a population mean	334
10.5 Hypothesis testing for a population mean	339
Revision exercises	346
 Answers	 354
